PROFESSIONAL SUMMARY

Systems-focused Software Engineer with proven contributions to major CNCF projects including Cilium and CoreDNS. Experienced in performance optimization, cloud-native networking, and security sandboxing across Go, Rust, and C++. Demonstrated ability to navigate complex codebases, implement RFC-compliant solutions, and collaborate effectively with open source maintainers. Passionate about systems programming, Kubernetes infrastructure, and building secure, high-performance software.

OPEN SOURCE CONTRIBUTIONS

Open Source Contributor

Sourcemeta Core (JSON Schema Library)

Remote

Nov 2025

- Replaced hash map-based vocabulary lookups with bitset-based approach, achieving O(1) lookups for 29 JSON Schema vocabularies (PR #2040)
- Designed hybrid data structure with unordered_map fallback for custom vocabularies, maintaining backward compatibility
- Refactored 19 files across walker, bundle, and alterschema modules (497 additions, 129 deletions)

Open Source Contributor

Cilium (CNCF Graduated Project)

Remote

Apr 2025 – Present

- Fixed Gateway API reconciler crash when TLSRoute CRD is absent (PR #38874)
- Resolved routing misconfiguration by implementing proper Group and Kind validation for parentRef matching (PR #39275)
- Authored egressDeny policy documentation, backported across v1.16–v1.18 branches (PR #40272)

Open Source Contributor

CoreDNS (CNCF Graduated Project)

Remote

Jul 2025 – Present

- Fixed SRV record case handling to comply with RFC 6763 for proper mDNS/DNS-SD service discovery (PR #7402)
- Corrected TXT record comparison logic per RFC 1035, merged into v1.12.3 (PR #7413)
- Eliminated flaky multiset tests via fresh port allocation and channel-based cleanup (PR #7438)
- Refactored plugin test framework for improved maintainability and test isolation (PR #7798)
- Enhanced monitoring endpoints for better observability and debugging (PR #7799)

Open Source Contributor

Kagent (Kubernetes AI Agent Platform)

Remote

Dec 2025

- Fixed agent deletion bug by standardizing ID format consistency, eliminating orphaned records (PR #1178)

EDUCATION

Master of Computer Applications (MCA)

2024

Andhra University, Visakhapatnam, India

SKILLS

Cloud Native & Infrastructure: Kubernetes, Cilium, Gateway API, eBPF, Network Policies, Cgroups v2, Linux Namespaces, Service Discovery

Systems Programming: Go, Rust, C++, Performance Optimization, Security Sandboxing, DNS Protocol

Languages: TypeScript, Python, Java

Tools & Practices: Tokio, Axum, Maven, Git, GitHub Actions, CI/CD, Observability

PROJECTS

Purple AI Sandbox — Rust, eBPF, Seccomp BPF, Linux Namespaces, Cgroups v2, Tokio, Axum

Secure runtime for untrusted AI agents with multi-layer defense: eBPF packet filtering, syscall validation, resource enforcement. Features pre-built security profiles, REST API with auth, and JSON audit logging.

breveTest — Java, Maven, REST APIs

Declarative API testing framework enabling REST testing without code. Tests defined via .breve config files with automatic discovery during Maven builds. Supports all HTTP verbs and CI/CD integration.
