Professional Summary

Open source contributor with 19 merged PRs across 10 external projects, including 3 CNCF graduated/incubating projects (CoreDNS, Cilium, Strimzi). Contributions span bug fixes, security hardening, performance optimization, and observability, primarily in Go and C++. Focused on cloud-native infrastructure, Kubernetes operators, and networking protocols.

Open Source Experience

CoreDNS (CNCf Graduated)

Jul 2025 – Jan 2026

DNS server powering service discovery in every Kubernetes cluster

- Fixed SRV record case handling to comply with RFC 6763 for proper mDNS/DNS-SD service discovery ([PR #7402](#))
- Corrected TXT record comparison logic per RFC 1035, merged into v1.12.3 ([PR #7413](#))
- Eliminated flaky multisoocket tests via fresh port allocation and channel-based cleanup ([PR #7438](#))
- Hardened ready, pprof, and health plugins against slowloris attacks by adding server timeouts per gosec G114 ([PR #7798](#))
- Resolved integer overflow warnings across 26 files by adding bounded gosec G115 suppressions ([PR #7799](#))

Cilium (CNCf Graduated)

Apr – Jul 2025

eBPF-based networking, security, and observability for Kubernetes

- Fixed Gateway API reconciler crash when TLSRoute CRD is absent, preventing production deployment failures; backported to v1.17 ([PR #38874](#))
- Resolved routing misconfiguration by implementing Group and Kind validation for parentRef matching per Gateway API specification ([PR #39275](#))
- Authored egressDeny network policy documentation with real-world examples, backported across v1.16–v1.18 ([PR #40272](#))

Strimzi (CNCf Incubating)

Jan 2026

Kafka on Kubernetes via operators and custom resources

- Separated MirrorMaker 2 metrics from Kafka Connect defaults, fixing incorrect connector metric exposure ([PR #12277](#))
- Added KafkaNodePool resource counter metric and overrode reconcileThese() for accurate node pool counting ([PR #12281](#))

Kamaji

Jan 2026

Kubernetes control plane manager for multi-tenant clusters

- Added unique controller names to prevent Prometheus metric label conflicts across soot managers ([PR #1043](#))
- Removed conflicting k8s.io/apiserver dependency that broke controller-runtime workqueue metrics initialization ([PR #1044](#))

Kagent

Dec 2025 – Jan 2026

Kubernetes-native AI agent platform

- Fixed agent deletion bug by standardizing ID format consistency between controller operations ([PR #1178](#))
- Fixed Helm chart to support custom release names by setting KAGENT_CONTROLLER_NAME dynamically ([PR #1195](#))

Aqua Trivy

Jan 2026

Cloud-native security scanner for vulnerabilities, misconfigurations, and secrets

Refined RBAC misconfiguration check (AVD-KSV-0050) to flag only critical verbs—escalate, bind, impersonate—reducing false positives on standard CRUD operations ([PR #514](#))

Sourcemeta Core

High-performance C++ JSON Schema implementation

• Replaced hash map-based vocabulary lookups with bitset-based O(1) approach across 19 files, with unordered_map fallback for custom vocabularies (PR #2040)

Nov 2025

Fluvio

Distributed streaming platform built in Rust

Fixed duplicate source field in Topic CRD schema that broke ArgoCD server-side apply (PR #4626)

Jan 2026

Yardstick

MCP security benchmarking tool by Stacklok

Replaced TRANSPORT env var with MCP_TRANSPORT for ToolHive compatibility across 5 files (PR #55)

Dec 2025

go-exhauststruct

Go linter enforcing exhaustive struct initialization

Added structured GitHub bug report issue template with auto-labeling and validation (PR #117)

Jun 2025

Technical Projects

Purple AI Sandbox — Rust, eBPF, Seccomp BPF, Linux Namespaces, Cgroups v2, Tokio, Axum

Secure runtime for untrusted AI agents with multi-layer defense: eBPF packet filtering, syscall validation, and resource enforcement. Features pre-built security profiles, REST API with auth, and JSON audit logging.

BTE (Behavioral Testing Engine) — Rust

Deterministic testing engine for CLI/TUI applications. Spawns real processes in a PTY, sends input, captures output, and verifies behavior. Tests defined declaratively in YAML with seed-based reproducible execution.

Skills

Languages: Go, C++

Cloud Native: Kubernetes, Cilium, CoreDNS, Gateway API, Helm, DNS Protocol

Observability: Prometheus, Kafka/Strimzi, Grafana

Systems: Linux, Networking (TCP/IP, DNS), Git, GitHub Actions, Docker

Education

Master of Computer Applications (MCA)

Andhra University, Visakhapatnam, India

2024
